(54) Title: KVICK SKATE

WO 2005/091731 A3

(57) Abstract: Kvick skate is a new under-skate for use on all types of skates, professionally or amateurs. The skate will flex with a few milliliters, from short to long sliding surface according the skaters movement. This will give increased friction advantages and will increase the speed considerably, in the longitudinal direction and in turns forward and backwards skating due to movable plastic parts under the skate. The steel is replaced by adapted steel strips that easily can be clicked on and off for changing/replacement. The skate will reduce wear injury due to the fact that the under-skate will take off some of the load, which we know is a great problem in the professional world.
